NEW 32 CHANNEL HEADSTAGE AND HAPPY FATHER'S DAY

Dear Plexon Friends and Family,

As this weekend approaches, we are reminded that not only is it Father's Day here in the United States, but also in several other countries around the world – home to many friends and customers. Harvey and the entire Plexon team would like to wish all of the fathers, grandfathers, stepfathers, and fathers-to-be in our neuroscience community a very happy Father's Day!

UPCOMING EVENTS

We look forward to seeing many of you at the upcoming Neural Interfaces Conference (NIC), June 18–20 in Salt Lake City, and many others in Xian beginning June 25th at the Symposium for Chinese Neuroscientists Worldwide (SYCNW).

In addition to advances in OmniPlex and CinePlex, stop by the booths and ask about our growing optogenetic stimulation product line featured in two posters at NIC. The first one, "Electrically commutated LED sources for improved in vivo optogenetic experiments," discusses research supported by the Gladstone Institute of Neurological Disease at UCSF and led by Lex Kravitz, PhD. The second poster details research conducted at the University of Texas at Arlington in Samarendra Mohanty's lab, "Characterization of a fiber-coupled LED source for improved control over optogenetic stimulation."

THE NEW LOW NOISE, 1 GRAM, 32 CHANNEL HEADSTAGE

Or maybe you are more intrigued by some of the small-scale advances we have made back here in Dallas. Check out our 2nd generation 32 channel, 0.025" pitch headstage – weighing only 1 gram! It is 46% lighter, 53% smaller, and designed to better mitigate photo sensitivity.

Feel free to reach out to your Plexon Sales Engineer or email info@plexon.com with any questions. Have a wonderful weekend and hope to see you soon!

Stacie Hyatt
VP, Sales and Marketing
